

**ABSTRACT:**

Pedi Protectors are clear lightweight plastic (cellophane) covers designed to protect the nail polish on toes while wearing shoes.

The plastic is lined with lightweight oil such as Vitamin E oil. The oil acts as a lubricant on the toes to protect the nail polish from chipping or smudging. The oil also conditions the skin on the toes, leaving them smooth and moisturized. The Pedi Protector cover cladding is attached to cover 1 ¼ inch past the base of the toes, to the skin with a strip of type hypoallergenic adhesive type tape that holds the Pedi Protectors in place comfortably without irritation. The Pedi Protectors cladding and interior is a very lightweight piece and can be worn everyday to extend the life of a pedicure.
